DETAILED ACTION

Response to Arguments

1. Applicant's arguments filed 10/06/03 have been fully considered but they are not persuasive.

Applicant's argument – "The specification provides support for the claims by disclosing 1) the subset of information bits used to select the upconversion frequency are provided to control processor 266, 2) a preferred embodiment would scramble the subset of information bits provided to control to processor 266, and 3) As such, it is Applicant's assertion that the specification does support the claim for the scrambled subset of information bits to determine the selection signal" according to the second section of page 12 of the Application.

Examiner's response – As shown in figure 6 and the second section of page 12 of the Application, the specification discloses 1) a preferred embodiment would scramble the subset of the information bits by multiplier 260, and 2) the **subset** of the information bits are also provided to control processor 266, which controls the switch 264 for the selection. However, the specification does not support the claim for the **scrambled** subset of information bits to determine the selection signal. The scrambled subset of information bits is only provided to the bank of mixer 268a, 268b,, and 268n.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

Art Unit: 2634

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 2, 5 and 12-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The specification and drawings do not describe that "the selection signals is determined in accordance with the **scrambled** subset of bits." The specification only teach that, for example, page 17, lines 11-23, "In accordance with the subset of information bits, control processor 522 provides a code channel selection signal to Walsh symbol generator 508 and provides a frequency selection signal to variable frequency synthesizer 516." The subset of information bits is used for the selection instead of the **scrambled** subset of bits.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 2634

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
